Main Features

- Duct-installable
- Multiple sizes available
- Crush and impact resistant
- HDPE Sheath
- Multiple bundle configurations
- RoHS Compliant

Product Overview

Enbeam duct installable blowing tubes have been designed for direct installation into existing ducts to allow blown fibre to be distributed externally. All tube bundles are over-sheathed with High Density Polyethylene (HDPE) to withstand the friction when installing the micro ducts.

All internal tubes are colour coded for easy identification and have a low friction inner coating to reduce drag & maximise blowing distances. Tubes are easily broken out of the main sheath and can be branched-off using the Enbeam push-fit blown tube connectors. The tubes are supplied on disposable wooden drums and capped at both ends to prevent ingress of moisture or contamination.
