Product Overview

The Enbeam dual jacket 1 fibre drop cable has been designed for the FTTX market, the cable is designed to allow the transition between internal and external applications without changing cable types, reducing the need to splice.

The cable has an internal grade 3 mm tight buffer G.657.B3 LSZH UV-resistant jacket fibre covered with additional Aramid yarn and two rip cords this is then covered with a LSZH UV-resistant outer jacket.

The outer jacket can then be stripped back to reveal the internal grade cable to the required length for installation into the building, these cables can be pre-terminated with standard connectors, our new pre-terminated ferrule connection or left as an open ended, saving time and money on site as no external transition/splice enclosure is required.
